Software Engineers are *“Knowledge Workers”*

*“The most valuable asset of a 21st-century institution, whether business or non-business, will be its **knowledge workers** and their **productivity**.”*

Peter F. Drucker

Drucker, Peter F. *Management Challenges for the 21st Century*. HarpberBusiness. NY, NY. 1999.

results = f(time)

The figure displays four graphs illustrating different progress curves over time (t) on the x-axis and results (%) on the y-axis:

- Ideal Progress:** A straight red line starting from the origin, representing a constant rate of progress.
- High Performance Progress:** A red S-curve that starts slowly, accelerates in the middle, and levels off towards the end.
- Typical Progress:** A red S-curve that starts slowly, accelerates in the middle, and levels off towards the end.
- Typical Progress with Setbacks:** A red S-curve that starts slowly, accelerates in the middle, but includes several small dips and plateaus before leveling off.

The Lessons of a Long-ago Disaster...

What do you know to be important but are unable to measure?

- » As of October 1707: longitude

Longitude: How far east or west you are?

- » Admiral Clowdisley Shovell misjudged longitude.
 - » 4 warships and 2,000 lives were lost

Buckingham, Marcus, Curt Coffman. *First, Break All The Rules*. Simon & Schuster. NY, NY. 1999.

What is Your Software Development Performance?

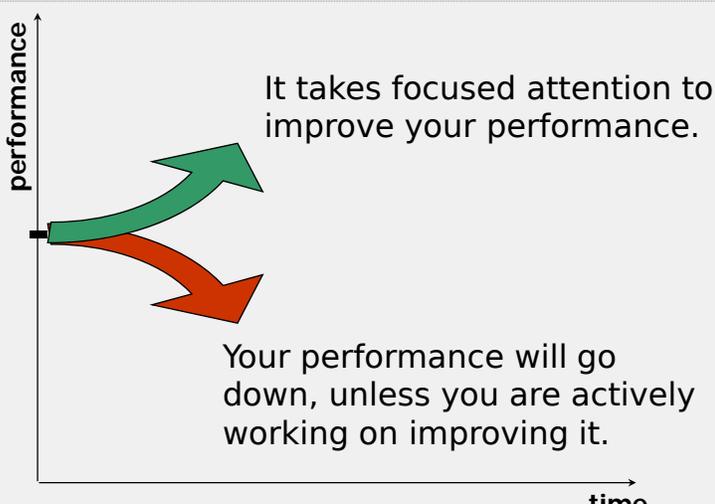

Have you been thinking about it before?
 » Do you know your “batting average?”

Software Development Performance is the complexity of all activities that an individual or team does in order to create software.

15 Feb 2007 © 2002-2007 Steven Teleki. All rights reserved. 9

StevenTeleki Software Engineering: A Function of Time
 Home | Situation | Complication | Performance | Results Curves | Time & Software Engineering | Conclusion

There Is NO Constant Performance!

It takes focused attention to improve your performance.

Your performance will go down, unless you are actively working on improving it.

Knowledge Worker Productivity

“The most important, and indeed the truly unique, contribution of management in the 20th century was the fifty-fold increase in the productivity of the MANUAL WORKER in manufacturing.

“The most important contribution management needs to make in the 21st century is similarly to increase the productivity of KNOWLEDGE WORK and the KNOWLEDGE WORKER. ”

Drucker, Peter F. *Management Challenges for the 21st Century*. HarpberBusiness. NY, NY. 1999.

LOW PRODUCTIVITY KILLS!

“However low its wages, a business [...] is unlikely to survive, let alone prosper, unless it measures up to the standards set by the leaders in its field, anyplace in the world.”

Peter F. Drucker

Well-Run Teams

- Ideal Progress: Steady, linear progress toward the finish line.
- High-Performance Progress: Close to ideal, slower to start, and slows down before finish

15 Feb 2007 © 2002-2007 Steven Teleki. All rights reserved. 14

StevenTeleki Software Engineering: A Function of Time
 Home | Situation | Complication | Performance | Results Curves | Time & Software Engineering | Conclusion

Typical Project Team

Typical Progress

Typical Progress with Setbacks

- Typical Progress: Slow start, fast progress in the middle, gets bogged down in testing and debugging at the end.
- Progress with Setbacks: New work is continuously discovered.

Some Assumptions on Time in Software Engineering

- "We never have enough time."
- "Planning is a waste of time."
- "We do design if we have time."
- "We don't have time for reviews."

Did you ever ask: Why?

15 Feb 2007 © 2002-2007 Steven Teleki. All rights reserved. 20

What is Time? (Take 2)

Time is the most perishable—and most renewable—resource we have!

Two Fallacies:

- ✓We can somehow save time.
- ✓We get more time later.

The Influence of Assumptions over Behavior

“A discipline’s basic assumptions about reality determine what it **focuses** on. [...] For a social discipline [...] the assumptions are a great deal more important than are the paradigms for a natural science. [...]

“A social discipline [...] deals with the behavior of people [...]. **Practitioners will therefore tend to act and behave as the discipline’s assumptions tell them to.**”

Drucker, Peter F. *Management Challenges for the 21st Century*. HarperBusiness. NY, NY. 1999.

Time to Plan!

Planning is predetermining the course of events.

Planning is when you lay out a way to solve the problem that you face.

StevenTeleki Software Engineering: A Function of Time
Home | Situation | Complication | Performance | Results Curves | Time & Software Engineering | Conclusion

Time to Learn (continued)

Crawl, walk, run!
An accomplished walker doesn't think about the mechanics of the steps anymore.

Learning Dilemma
We learn best from experience but we never directly experience the consequences of many of our most important decisions.

Senge, Peter. *The Fifth Discipline*. Pg. 23. Currency Doubleday. New York, NY. 1990.

15 Feb 2007 © 2002-2007 Steven Teleki. All rights reserved. 26

Time to Do!

Activities according to David Allen:

1. Doing predefined work
2. Doing work as it shows up
3. Defining your work

Allen, David. *Getting Things Done*. Penguin Books. NY, NY. 2003.

Time to Research vs. Time to Develop

Research

- » Inventing something new, that has never existed.
- » It can only be time limited.

Development

- » Use existing technology, or implement an invention.
- » Can be planned & scheduled; it has been done before.

Library research and learning can be planned.

StevenTeleki The Art & Science of Software Process
Home | Situation | Complication | Performance | Results Curves | Time & Software Engineering | Conclusion

Time to Get Back into it: Context

- ✓ What is Context?
 - » Everything that is said, done, drawn, or written during the software development process.
- ✓ How much Context do you need?
 - » Just enough to always know where you are with the work and to know what to do next.

Effective On-Task Time (EOT)

The time effectively spent on project work.

Doesn't include:

- » Reading email (usually even if it is project related)
- » Meetings (except well-defined project meetings)
- » Lunch time, breaks, phone conversations, etc.

Measure your EOT per week.

- » Best organizations in the world get 20+ hrs/week.
- » You may only get about 3-5 hrs/wk the first week. You should get up to 15 hrs/wk in a few weeks.

Time to Do Something That Nobody Does!

- Review time is the same: before or after!
- Reviews after compile are not very effective. The compiler doesn't care.
- Compiles != Defect Free
 - Compile defect: syntactic error
 - Unit Test defect: semantic error
- When you review, you find with both semantic and syntactic errors.
- You can use the compiler to check the quality of your review.

Time to Sync Up!

All knowledge workers must answer the following questions:

1. What information do I owe to the people with whom I work and on whom I *depend*?
 - a. In what form?
 - b. And in what time frame?
2. What information do I need *myself*?
 - a. From whom?
 - b. In what form?
 - c. And in what time frame?

In Summary

- ✓ Your only currency is **time**.
- ✓ Software Engineering is intense **knowledge work**.
- ✓ If you want different results, you must change the way you **act** and **think**.
- ✓ The way you spend your time early will have **effects** late in the game.
- ✓ You need to know your **performance**.
